DNA SHORT

Opis produktu

DNA is Deems latest design, which combines seemingly contradictory qualities. The assumption was to create a product aimed exclusively for dynamic and freestyle pro-flyers. The aim was to move away from the current canons of flywear design in order to achieve the greatest possible drag reduction to decrease instability and force the greatest possible control over the air. Our tests revealed that our suit, despite being difficult to fly, enforces correct technique with less advanced pilots and significantly speeds up learning progress.

Technically, every single DNA is made of only 12 panels. Thick, very soft and slightly elastic fabric (4% spandex) in combination with a small amount of stitching leads to an almost perfect fit. A special panel placed between shoulder blades eliminates material stretching and pulls the shoulders rearwards to enhance both – body position and fitting.

Fit, fabric and technical design - all these elements make the suit stretch to a little extent all over the body, while maintaining the same air pressure on the entire surface.
