Element

Opis produktu

The new ELEMENT student canopy simultaneously fulfils the design and flight performance requirements posed by modern training methods and instructors. It is available in sizes 160, 180, 200, 220, 240, 260 sqft and constitutes a worthy successor to the BALANCE, having secured a firm standing in many drop zones all over the world since its launch in 1996.
Of course, the ELEMENT has the fantastic heritage of the BALANCE behind it. It is virtually stall free with very good flare dynamics as well as no tendency to surge from deep brakes, accompanying students through current canopy flight training methods.
The basic shape of the ELEMENT is slightly truncated and constitutes a double trapezoid with most of the leading edge kept straight, only the trailing edge having a slight to moderate taper. This guarantees stable, on-heading openings combined with light toggle pressure, staying fun and controllable throughout students' ability range.
The Element is of hybrid construction with a Zero Porosity top (PN4 fabric) and PN1 (F-111 equivalent) bottom and ribs.
