RW Jump Suit

Opis produktu

RW jump suits for beginners and experienced formation skydivers are made to measure and can be customised in the module system right through to competition suit.Only extremely durable nylon or 65/35 polycotton materials are used in the production. Our complex finishing techniques guarantee a long durability. 4-Thread safety-stitching on the inside, step-stitching and 3-stitch zigzag outside. Bar-stitching on all loading points. Good freedom of movement due to spandex fabric in the back area. All reinforcements and grips are made from hard wearing parapack. Basic version with outside arm and leg grips, one inside pocket. The suit is built according to the customer’s measurements and choice of colors. For the front side, there are 2 materials with different values of wind resistance to choose from. The choice of material can influence the rate of fall. Nylon suits have a smooth surface and therefore a faster rate of fall than polycotton suits.There are also 2 different styles of forearms to choose from: Tight fitting spandex arms, or looser fitting polycotton arms with a lot of material also regulate the fall rate. Tight fitting spandex forearms have a faster fall rate than polycotton ones.Three different fittings are offered; the choice also influencing the fall rate. Dependant on body size and mass, you can adapt yourself to your "playmates". We recommend tight fitting nylon suits for light ladies, loose polycotton suits for the large, heavy men, and extra wide fitting suits for the real heavyweights. Tight fitting suits have a faster fall rate than loose fitting suits!
